# NW2G-MI

## New Product Announcement

[www.noisewave.com](http://www.noisewave.com)

NoiseWave announces the immediate availability of the NW2G-MI Noise Instrument. model. The unit is a manual noise generator which features broadband frequency coverage from 1 MHz to 2 GHz. Power out is 0 dBm and the unit features a flatness of +/- 2.0 dB. The NW2G-MI operates from standard line voltages.

Applications for this instrument include system and component wireless testing, signal simulation, CATV testing and as an economical source for bit error rate testing.

The unit is supplied in a half rack case and comes with a front panel rotary attenuator to vary the output level. The NW2G-MI is economically priced and delivery is typically from stock. Other output levels and frequency ranges are also available. Contact NoiseWave today to learn more about how this new product may fit your design needs.
