NoiseWave's NW-M series amplified noise models feature high output power and broadband frequency coverage to 18 GHz. Applications for these modules include wireless test, built-in test equipment, dithering for increased dynamic range of A/D converters, and as an economical source for bit error rate testing. Utilizing small internal parts count these units are economically priced and delivery is typically from stock. Other voltages, output levels and frequencies are also available, please contact NoiseWave for details.

Specifications:

Input Voltage: +15Vdc (internally regulated)
Operating Temperature: -40ºC to +100ºC
Temperature Coefficient: 0.025 dB/ºC
Storage Temperature: -55ºC to +150ºC
Output Connector: SMA female
